		High Energy or Nervous Horses	Substitute 4 Omega Sun	2+ packets per day	Substitute 4 Omega Sun

Put the benefits of "free-range pasture" back in your horse's diet!

Energy for Life®

Equine Nutrition Made Simple

Feeding a horse would seem to be a simple aspect of horse ownership, yet with today's competition schedules it can become quite complex. Years ago, horses benefited from enzymatically active whole grains and native grass pastures grown in fertile soils.

Modern horses have a very different lifestyle than their wild and free ancestors. Challenges for performance horses have changed significantly, yet their digestive and immune systems and their nutritional requirements have remained essentially the same.

What horses are fed is the ultimate and sustaining element for their overall health and longevity. To fill in the gaps of today's processed feeds and synthetic vitamins, many horse owners are forced to turn to drugs to address the aches, pains, and immune dysfunction that affect horses eating less-than-ideal diets.

Performance horses can stay healthier, happier, and more resistant to illness and injury when they receive a minimally processed grain and hay diet as well as supplemental plant-based digestive aids and nutrient-rich, enzymatically active foods.

Q: Do you ever wonder why horses may need muscle builders, calming agents, immune system builders, bronchiodiolators, skin and coat formulas, electrolytes, energy formulas, blood builders, hoof builders, vitamin and mineral supplements, and digestive aids?

A: Their basic needs for whole-food nutrients aren't being met.

*Running competitively is tough, and trying. To keep Risky Chris at his best takes everything we've got. That's why I rely on **Simplexity Health™** products to keep us at the top. They provide us with all the raw nutrients we need...naturally, efficiently, and simply.*

*Kappy Allen,
2000 World Champion Barrel Racer*

The benefits of managing horses naturally are:

- Improved flexibility and recovery
- Improved digestion
- Focused energy and improved attitude
- Strong bones, hooves, and connective tissues
- Healthy gestations and foals
- Enhanced recovery after hard work
- Extra support for joint mobility and function
- Increased stamina and performance
- Decreased inflammation of muscles, joints, and tendons
- Clear eyes, shiny coat, and longer mane and tail
