Get an early start on your spring planting activities. Promote being “green” and living a greener lifestyle by including **PLANeT Food®** in your springtime gardening and planting plans. Prepare your soil and potting mixes to give your plants a head start. Flex your green thumb and welcome spring with the planting of gardens of any kind – herb, vegetable, raised, container, rose, and flower bed....and watch your garden grow!

Let PLANeT Food® become your favorite gardening tool!

First Lady Michelle Obama’s creation of the White House vegetable garden has been a hot topic on all of the news and eco-media worldwide. Her focus on gardening, being outdoors, and the benefits of growing healthy organic food has ignited the notion of gardening being ‘the right thing to do’ – not to mention the enjoyment.

For 25+ years **Simplexity Health** has offered a **100% natural macrobiotic nutrient system** that is known to:

- **promote easy seedling growth**
- **produce bigger and healthier vegetables**
- **yield more vibrant flowers, plants, and luscious fruits**
- **generate greener and more dense lawns, shrubs, and healthier trees**

Remember! You are what you eat, so nourish your veggie garden and reap its abundant harvest while enjoying naturally magnificent flowers and blooms—all from the ground up!

PLANeT Food® contains 100% organic blue-green microalgae to stimulate microbial activity in soil, and volcanic rock dust for a broad spectrum of natural trace minerals within the root zone, while maintaining the matrix of life in any soil. It builds a sponge-like soil structure that retains air and water together with soil nutrients, and adds soil nutrients that help restore depleted soils.
